

Measure, understand, and control AI visibility – independent, in your infrastructure, on-premise.

Why AI visibility matters now

Customers increasingly ask their questions directly to AI assistants – not just Google. That’s where it’s decided which brands get recommended, which websites get cited, and which opinions become visible. If your brand doesn’t appear in these answers – or is misrepresented – you lose visibility, leads and thought leadership without even noticing.

AIVIMO is an on-premise tool for professionals who want to keep their AI visibility in their own hands – without dependence on external platforms.

What AIVIMO does

AIVIMO automatically monitors how your brands and domains appear in leading AI platforms – via freely selectable prompts, across multiple platforms, with complete history.

- Sends prompts to ChatGPT, Perplexity, Claude, Gemini, Grok and more.
- Detects mentions, citations, and positioning.
- Stores all responses locally – historically evaluable.
- Designed for the DACH market and beyond.

Who it’s for

SMEs with clear brands

Know whether your brand appears in AI answers – and how to improve its presence.

Corporate groups

Multiple brands, countries and domains – AI visibility as a strategic topic.

Media & publishers

High content output, strong competition for source status in AI answers.

Agencies & consultancies

Monitor client brands and domains, prepare data-driven recommendations.

Features

Multi-platform monitoring

OpenAI, Perplexity, Anthropic, Google, xAI and more – compare visibility across platforms.

Prompt sets by business logic

Freely definable prompts; complete version history of all changes.

Clear metrics

Citation Rate, Mention Rate and positioning per brand/domain and provider. Time series for trends.

Transparency & Changelog

All responses with provider, model, timestamp and cost. Audit trail for configuration and prompts.

Your benefits

- › **Data sovereignty** – All data in your infrastructure. No SaaS, no cloud dependency, full control.
- › **Independence** – Your own tooling instead of vendor lock-in. You control prompts, frequency and analysis.
- › **Early detection** – Spot declines before they affect revenue or reputation.
- › **Proof** – AI responses documented – a solid argument for stakeholders and clients.

Technical operation

- On-premise in your data center or hosted in a European facility
- Core service (Go), SQL database, web dashboard in browser
- Configuration via web GUI or configuration file

Licensing

Commercial license with optional support.
